HEAD LICE!

14th December 2016

Dear Parents

Please check your child's hair tonight – **we have been informed of head lice in a child's hair.**

It is very important that every child's head is checked in order to stop re-infection. If you find your child has head lice or the eggs please treat **immediately. It is important to keep up regular combing with hair conditioner and a fine toothed nit comb for 2 weeks after initial treatment. It can take up to an hour each session to catch all the lice and eggs, but it is worth the effort to avoid re-infection!**

Please contact the Children's Health Adviser if you need further help or advice on 01305 255215 or your local pharmacist or GP.

Thank you.
